

Halcyon Breakwater Survey

The Halcyon Breakwater shelters the ferry terminal at Port Essing. It is 1,340 meters long, was completed in 2011, and its crest sits 4.6 meters above the mean high-water mark. The seaward face is armored with interlocking concrete anchor blocks cast on site.

The following page reproduces the dive team's scanned field note from the annual underwater inspection of the structure.

DIVE TEAM NOTE

**DIVERS COUNTED FIFTY EIGHT
ANCHOR BLOCKS ALONG THE NORTH
FACE OF THE HALCYON BREAKWATER.

NO SCOUR DAMAGE WAS FOUND.**
